Compliance

Mining compliance is an extremely important part of the South African economy and at times it may be perceived to even be expensive and overly complicated. This is where we come in. We can help you with all your compliance needs in one place. It's too expensive to avoid compliance as the risks are just too high. We guarantee you great service and relevant, legal and effective compliance solutions.

Transport

We serve the mining industry in many ways. Transporting the valuables of a person and/or organisation safely from one point to the other, is just one of the ways that we can add value. Our transport fleet is legal, effective and compliant and we believe in training our drivers to be the best of the best. Our drivers are experienced and reliable.

Explosives

Blasting is the single most critical operation affecting the entire mining or quarrying cycle. The current pain points in blasting stem from several key elements, including safety, community relations, legislation and production requirements. Health, safety and environmental responsibilities are an extremely important way (guideline) for us to conduct ourselves. With our expertise and years of experience, we guarantee efficient and sustainable services that will benefit your organisation.
